COTTON TRIALS

Location: Haywood County, Tennessee

**\$214/acre
net return**

COTTON TRIALS — SEVERE DROUGHT

Location: Houston County, Alabama

Trial notes

- BF₄ was applied at a rate of 10 oz per acre at pinhead square and 10 oz at first bloom **under severe drought conditions**
- Cotton plants that were treated with BF₄ produced an average of 911 pounds of lint per acre; 1,117 pounds of seeds per acre; and 1.89 bales per acre more than untreated cotton plants
- **The ability of BF₄ to increase abiotic stress tolerance ensured a harvest**

Non-Irrigated Cotton

● BF₄

● Grower STD
